To whom it may concern,

Re: Rishabh Ramteke Internship Recommendation Letter

I had the privilege to co-supervise Rishabh in his summer internship at RMIT University over May to July 2019.

During his internship, he worked on extending Blockmodelling, which is an important technique in social network analysis, to incorporate multiple sources of information including edge types and node attributes. He devised new, efficient approaches to perform pareto based optimisation, that can find groups of nodes that are highly similar in connections and/or attributes. Despite little experience with blockmodeling, he was able to quickly pick up the concepts and conduct the necessary research. The new approaches Rishabh worked on has improved on the state of the art and we are aiming to submit the research to AAAI conference, which is one of the top ranked conferences in AI.

It has been a pleasure to work with Rishabh. He is intelligent, diligent, focused, hardworking and easy to work with. In the future, we would be delighted if he returned to start a research position with us.

Yours sincerely,

Jeffrey Chan
